Troubleshooting the Pilot Flame on a Gas-Fired Furnace or Boiler			
Appearance	Possible Cause		
Small Blue Flame	If the flame is too small, check for a clogged pilot orifice or gas filter. If the orifice and filter are clear then check for low gas pressure and adjust as necessary.		
Lazy Yellow Flame	This problem may come from an overly large orifice, a dirty lint screen, or a dirty primary air opening.		
Waving Blue Flame	The problem may be a result of an excessive draft at the pilot location. Install a shield to protect the pilot.		
Noisy Lifting Blowing Flame	This may be the result of high inlet gas pressure. Install a pilot pressure reducer.		
Hard Sharp Flame	The may be the result of a too-small orifice. However, this flame is normal for manufactured, butane-air or propane-air fuels.		

CALCULATING THE HEAT INPUT RATE OF A GAS-FIRED FURNACE

- Determine the gas flow rate per hour of the furnace. This can be done by turning off all other gas appliances, operating the furnace and observing the gas meter for a 15-minute period. Multiply the observed cubic feet of gas consumed times 4 and you will have determined the amount of cubic feet of gas consumed for a one-hour period.
- After determining the gas flow rate of the furnace, obtain the gas heating value of the gas being supplied to the furnace. For 2. the Pittsburgh area, a value of 1,050 BTU's per cubic foot can be used for most areas. However to be certain you should contact your gas supplier.
- To determine the Heat Input Rate of the furnace simply multiply the gas flow rate by the gas heating value.

Heat Input Rate = Gas Flow Rate x Gas Heating Value

INTERESTING BUT USELESS FACTS

- The average person falls asleep in seven minutes.
- The combination "ough" can be pronounced in nine different ways. The following sentence contains them all: "A roughcoated, dough-faced, thoughtful ploughman strode through the streets of Scarborough; after falling into a slough, he coughed and hiccoughed."
- The giant squid has the largest eyes in the world.
- The longest one-syllable word in the English language is "screeched."
- The Main Library at Indiana University sinks over an inch every year because when it was built, engineers failed to take into account the weight of all the books that would occupy the building.

- The microwave was invented after a researcher walked by a radar tube and a chocolate bar melted in his pocket.
- The national anthem of Greece has 158 verses. No one in Greece has memorized all 158 verses.

TROUBLESHOOTING GAS COMBUSTION			
Problem	Cause	Remedy	
Yellow Tipping	Shortage of primary air	Increase primary air	
	Shortage of total combustion air	Clean burner	
	Incorrect orifice	Check orifice and replace if needed	
Lifting Flames	Too much primary air	Decrease primary air	
	Incorrect gas pressure	Adjust gas pressure	
	Incorrect orifice	Check orifice and replace if needed	
Flashback	Primary air flow too high	Decrease primary air flow	
	Gas flow is too low	Check gas input	
		Replace burners	
Extinction Pop	Defective gas valve	Replace gas valve	
Wavering Flames	Drafts in combustion chamber	Check furnace panels and draft is satisfactory	
	Cracked heat exchanger	Replace heat exchanger	
Delayed Ignition	Improper gas pressure	Adjust gas pressure	
	Slow opening gas valve	Replace gas valve	
	Misdirected pilot flame	Redirect pilot flame	
	Dirty orifice or burners	Clean orifice or burners	
	Drafts across the burners	Check furnace panels	
Flame Rollout	Shortage of combustion air	Check for a blockage of combustion air openings	

EXPECT SUCCESS AND IT IS YOURS

Set your goals high.

You'll find that when you expect good things to happen, strangely enough, they will happen. Your expectation energizes your goals and gives them momentum. Your life will always respond to your outlook.

You must first expect to succeed if you want to succeed. And you can't expect to succeed beyond your wildest expectations unless you begin with some pretty wild expectations.

The dreams you choose to believe in come to be. When you believe something good can happen, it does.

Success is a matter of expectation.

HONESTY IS STILL THE BEST POLICY

Before you lies two paths ~~ honesty and

dishonesty.

The shortsighted embark on the dishonest path, the wise on the honest one. When you help others you help yourself,

when you hurt others you are hurting yourself. Character overshadows money, and trust rises above fame. Sooner or later everyone sits down

to a banquet of consequences. It is better to fail with honor then succeed by fraud. There is no right way to do something wrong.
